Method

Add phase A into a disinfected glass beaker, stir well to hydrate xanthan gum and heat to 160F/71 C. Add phase B to another glass beaker and heat to 160F/71C until the solids are melted. Add phase B to phase A and stir well until homogeneous. Remove from heat. Cool to 100F/40C then add phase C in order and stir after each ingredient.

Properties

This hair masque is ideal for heat damaged hair, using cholesterol to repair and deeply nourish the hair. In addition, barley protein has a high level of Proline, which can help protect hair from heat damage. Provitamin B5 helps soften the hair and bring life back to it after exposure to heat tools or environmental stress.
