Procedure

Phase A: Combine ingredients in a heat-resistant glass beaker and Heat to 75C.

Phase B: Add ingredients into a separate vessel, and heat to 75C.

Add phase A to phase B under good agitation (propeller mixer at 500rpm). Cool to room temperature.

Homogenize for a short time.

Phase C: Add to the batch and blend well after each ingredient.

The body butter will increase viscosity in the upcoming days and becomes quite solid within a couple weeks, therefore it is best packaged into jars. If the natural rose scent is not desired, please switch the phenethyl alcohol with phenoxyethanol SA for example.

Properties

This non-greasy body butter boasts a rich blend of Cocoa Butter, Biojelly emollient, and a robust emulsifier system to effectively lock in moisture, plus Algave Extract has shown to provide soothing and calming properties. The natural Phenethyl Alcohol imports a subtle rose fragrance, complemented by the inherent cocoa scent from the cocoa butter, eliminating the need for additional fragrances.
