

Vitamin C Cream Base

Specification Sheet

Description: Cream base made with a high concentration of vitamin C and other botanical antioxidants. Contains 7 organic ingredients. Vegan. 84% Organic.

Ingredients: Organic aloe leaf juice (aloe barbadensis), organic coconut oil (cocos nucifera), emulsifying wax (cetyl alcohol, stearyl alcohol, polysorbate 60), glycerin, stearic acid, vitamin c ester (ascorbyl palmitate), phenoxyethanol, vitamin e (tocopherol), sunflower seed oil (helianthus annuus), green clay extract (montmorillonite), organic blueberry fruit extract (vaccinium corymbosum), organic red raspberry fruit extract (rubus idaeus), organic cranberry fruit extract (vaccinium macrocarpon), organic white willow bark extract (salix alba), rosehip seed oil (rosa canina), organic neem seed oil (melia azadirachta), organic rosemary leaf extract (rosmarinus officinalis), organic sunflower seed oil (helianthus annuus), organic alcohol, xanthan gum, tetrasodium glutamate diacetate

Appearance: Off-white to light tan cream, bland odor

Benefits:

- Packed with Vitamin C esters the skin loves.
- Formulated with antioxidants to brighten and balance skin.
- Simple and rich cream perfect for mature, sensitive and dry skin.
- Easily absorbed by skin resulting in a healthy glow.

Use: Can be used as is or customized further by adding up to 20% (volume percentage) of additional liquid ingredients. Addition of strong acids should be avoided as it destabilizes the emulsion. Being a natural cream base, slight separation during long standing, or warm temperatures can occur, can be reversed by blending. Please note: If the base is heavily diluted the viscosity decreases and additional preservatives may be required.

Preservation: Phenoxyethanol

Storage: Store in a closed container at a dry place at room temperature

Country of Origin: USA

Animal Testing: Not animal tested.

Vegan: Does not contain animal-derived components. No added Gluten.

Special Instructions: Be careful when adding acids. Already a small amount of acids such as AHA fruit acids can make the cream unstable and may separate. Please test pH and adjust acidity with TEA (triethanolamine) and test pH again. A good pH is in the range between 4.5 and 6.5. Being a natural cream base, slight separation during long standing, or warm temperatures can occur, can be reversed by blending.
