

Pigment Blend Sample Kit

Specification Sheet

Description: Sample kit of 7 different pigment blends (Bare Beige, Bare Neutral, Caramel, Earth Brown, Honey Beige, Natural Bluff, and Warm Beige). One sample jar contains about 1.5-2g (approx. 1 teaspoon) of powder. All blends contains titanium dioxide mixed with a standardized blend of different FDA approved high-purity pigments iron oxides. Thoroughly blended with machine blender to achieve ultrafine conformity. Brown powder, odorless. Insoluble, but easily miscible in water & oils.

CAS: 13463-67-7, 1332-37-2

INCI Name: Titanium dioxide, CI 77492 (iron oxides)

Properties: Provides superior color purity & saturation, outstanding dispersibility with no aggregate formation.

Use: Can be tinted with titanium dioxide or additional pigments to create individual lighter or darker color shades, respectively. For external use only.

Applications: Basic makeup color for various makeup products including face powders, foundations, bronzing powders, makeup creams, lipsticks, blush.
