

Carbomer 940

Specification Sheet

Description: Polyvinyl carboxy polymer crosslinked with ethers of pentaerythritol. Used as a viscosity enhancer or gelling agent primarily in systems where clarity or viscosity is required. Viscosity: 45,000-70,000 cps (0.5% solution).

CAS: 9003-01-4

INCI Name: Carbomer

Composition: Carbomer

Appearance: Fine white powder

Benefits:

- Acts as powerful, pH-sensitive gelling thickener useful for making clear gels.
- Stabilizes emulsions.

Use: Typical use level 0.1-0.5% depending on the type of formulation desired viscosity. Carbomer must be thoroughly mixed and hydrated. Increasing the pH to >6.0, gives a gel structure. Neutralization can be carried out with inorganic bases such as NaOH or KOH or triethanolamine (TEA). For external use only.

Applications: Gel-creams, hair gels, and other gels, lotions, creams.

Solubility: Water-soluble

Preservation: Preservative-free

Storage: Store in a closed container at a dry place at room temperature.

Country of Origin: China

Raw material source: Acrylic acid

Manufacture: Carbomer is produced by polymerization of acrylic acid to form high-molecular weight, cross-linked polymers of acrylic acid (polyacrylic acid).

Animal Testing: Not animal tested.

GMO: GMO-free (does not contain plant-derived components).

Vegan: Does not contain animal-derived components.

HS Code: 2916110000

California Prop. 65: WARNING: This product can expose you to chemicals including residual solvent benzene, which is known to the State of California to cause cancer or reproductive toxicity. For more information, go to www.P65Warnings.ca.gov
